PRODUCT REVIEW: ANDERSON POWER POLE CONNECTORS -

The Anderson Powerpole connector is more expensive than the older de facto standards of the two-wire trailer

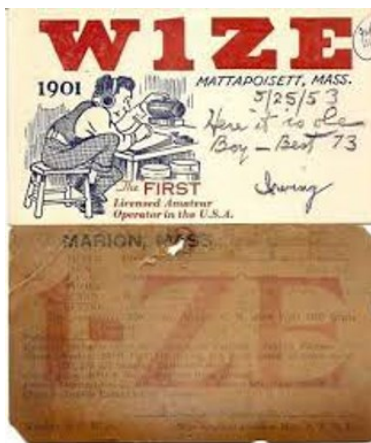

plug and the Molex connector, but provides a more reliable electrical connection (both mechanically and electrically), and is easier to adapt to a wider range of wire gauges. Powerpole connectors are available with [current](#) ratings up to 180 [amperes](#). The size most commonly used is the 15/30/45 ampere-rated variety. These sizes all use the same plastic housing in multiple colors, differing only in the metal contact inserted into the housing (selected based on the [ampacity](#) and [wire size](#)).^[1] The colors can be used to signify signal types (power, speaker, logic, microphone audio, etc.) or differing voltages. Powerpole connectors can be attached side to side and also stacked on top of each other to make, for example, four connections with one plug insertion. The contacts are rated for 100,000 no-load insertions and 250 hot-plugs at full load.^[citation needed] Larger Powerpole connectors (the SB/Multipole series) with two or three contacts in one molded housing are commonly used in various industrial settings, including as a battery connection for some [uninterruptible power supplies](#) (UPS), removable vehicle winches, many electric forklifts, and other [electric vehicles](#).

They are well worth using for all your power connection needs.

RADIO HISTORY : W1ZE THE FIRST US LICENSED HAM (1912....ed.)

- I used to listen to him back in the late 50's and when I was licensed I talked to him after school on 80 meters one day. You could always hear his strong signal from his Johnson 50 (transmitter) on AM. He had a loud clock sitting on top of his transmitter and you could hear the tick/tock when he transmitted.

More history !

He was part of not only of amateur radio but broadcast history as well!

HOW TO : DXing FOR BEGINNERS - Chasing DX is one of my and many others favorite operating mode ! It is like running a race against thousands of runners chasing toward the finish line. In this case a far away station that could be anywhere in the world. That is why most hams like me the only running race we do is from my operating position to the bathroom and back , hihi ! There are many contests and awards for working DX stations. EXAMPLE : CQ WAZ (Worked All Zones).

What is DXing.

We hope you enjoy these Mini Static's !

Stay tuned.....
